Indoor Coil Dimensions (L×H×W)	mm	580×38.1×176		580×57.2×176		920×38.1×264	920×57.2×264		
Unit	Net dimensions <sup>6</sup> (W×H×D)	mm	1020×495×200			1240×495×200	1360×591×200		
	Packed dimensions (W×H×D)	mm	1125×595×285			1345×595×285	1465×695×285		
	Net/Gross weight	kg	21.1/26.8		21.9/27.6	26.3/32.4	32.1/39.4	33.3/41.1	

Notes:

1. Indoor temperature 27°C DB, 19°C WB; outdoor temperature 35°C DB; equivalent refrigerant piping length 5m with zero level difference.
2. Indoor temperature 20°C DB; outdoor temperature 7°C DB, 6°C WB; equivalent refrigerant piping length 5m with zero level difference.
3. Air flow rates are from the highest speed to the lowest speed, total 7 rates for each model.
4. Sound pressure level is from highest level to lowest level, total 7 levels for each model. Sound pressure level is measured 1.4m below the unit in a Sem-anechoic chamber.
5. Sound power level is from highest level to lowest level, total 7 levels for each model.
6. Unit body dimensions given are the largest external dimensions of the unit, including hanger attachments.
7. Refer to the section Sound Levels for more details.

### 03. Unit Placement

#### 03.01. Placement Considerations

Unit placement should take account of the following considerations:

- Units should not be installed in the following locations:
  - A place filled with mineral oil, fumes or mist, like a kitchen.
  - A place where there are corrosive gases, such as acid or alkaline gases..
  - A place exposed to combustible gases and using volatile combustible gases such as diluent or gasoline.
  - A place where there is equipment emitting electromagnetic radiation.
  - A place where there is a high salt content in the air e.g. coastal environment.
  - Do not use the air conditioner in an environment where an explosion may occur.
  - Places like in vehicles or cabin rooms.
  - Factories with major voltage fluctuations in the power supplies.
  - Other special environmental conditions.
- Units should be installed in positions where:
  - Ensure that the airflow in and out of the IDU is reasonably organized to form an air circulation in the room.
  - Ensure IDU maintenance space.
  - The nearer the drainage pipe and copper pipe are to the ODU, the lower the pipe cost is.
  - Prevent the air conditioner from blowing directly to the human body.
  - The closer the wiring to the power cabinet, the lower the wiring cost is.
  - Keep the air-conditioning return air away from the setting sun of the room.
  - Be careful not to interfere with the light tank, fire pipe, gas pipe and other facilities.
  - The IDU should not be lifted in the places like load-bearing beam and columns that affect the structural safety of the house.
  - The wired controller and the IDU should be in the same installation space; otherwise, the sampling point setting of the wired controller need to be changed.

#### 03.02. Space Requirements

Figure 3.1: MFF series (air inlet from front) Exposed Floor Standing space requirements (unit: mm)

Notes:

1. Vertical unit with casing, with air intake from front and air outlet on top, for installation on a wall or on feet on the floor.
2. Additionally, it is required to keep 50mm between the rear and wall; 600mm between the front face and the obstacle. 1700mm vertical distance between the top of unit (outlet) and the upper obstacle.

Figure 3.2: MUF series (air inlet from bottom) Exposed Floor Standing space requirements (unit: mm)

Notes:

1. Vertical unit with casing, with air intake from below and air outlet on top, for installation on a wall or on feet on the floor.
2. Additionally, it is required to keep 50mm between the rear and wall; 600mm between the front face and the obstacle. 1700mm vertical distance between the top of unit (outlet) and the upper obstacle.
3. The footings are optional. You can purchase them separately.

Figure 3.3: MFS series Concealed Floor Standing space requirements (unit: mm)

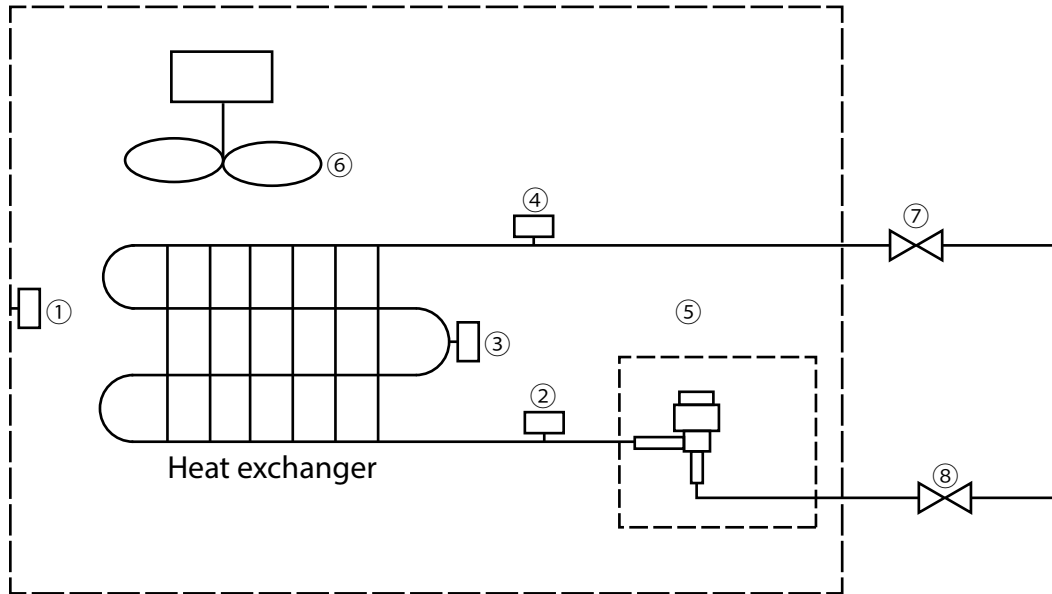

Notes:

1. Vertical unit for building-in, with air intake from below and air outlet on top, for installation on a wall.
2. Additionally, it is required to keep 20mm between the rear and wall; 600mm between the front face and the obstacle. 1700mm vertical distance between the top of unit (outlet) and the upper obstacle.

04.Piping Diagram

Figure 4.1: Floor Standing piping diagram

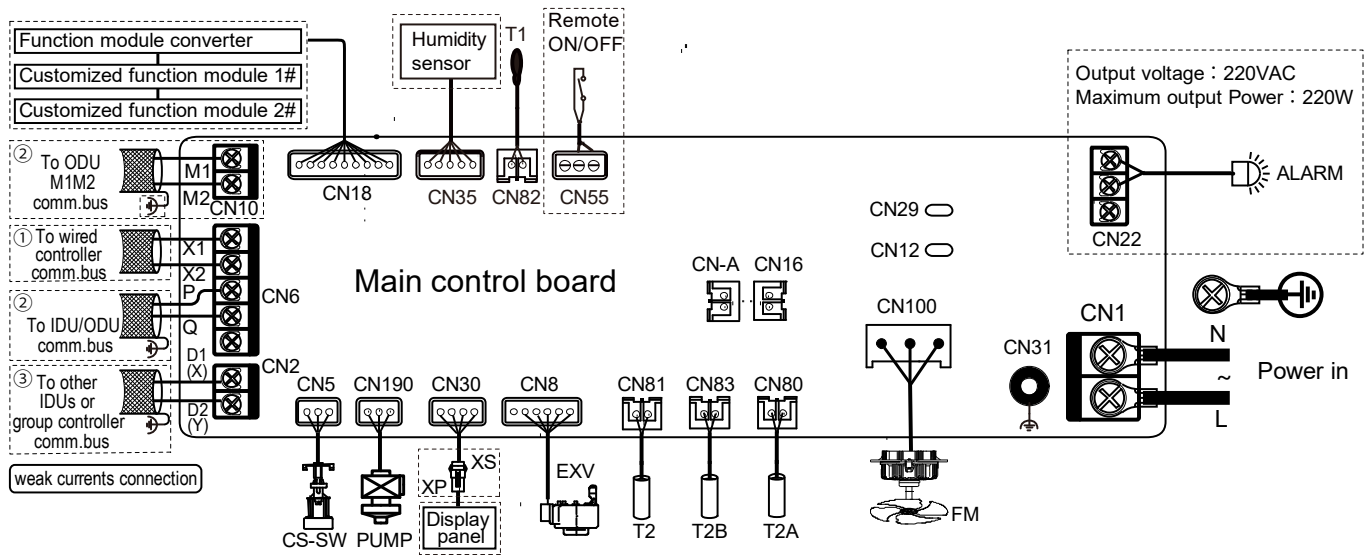

Legend

①	T1	Inlet Air Temp. Sensor
②	T2A	Liquid Pipe Temp. Sensor
③	T2	Middle Pipe Temp. Sensor
④	T2B	Gas Pipe Temp. Sensor
⑤	EXV	Electronic expansion valve
⑥	FM	Fan motor
⑦	-	Gas side (Flare Nut)
⑧	-	Liquid side (Flare Nut)

## 05. Wiring Diagram

Figure 5.1: Floor Standing wiring diagram

## Installation Notes

 **CAUTION**

- All installation, servicing and maintenance must be carried out by competent and suitably qualified, certified and accredited professionals and in accordance with all applicable legislation.
- Units should be grounded in accordance with all applicable legislation. Metal and other conductive components should be insulated in accordance with all applicable legislation.
- Power supply wiring should be securely fastened at the power supply terminals – loose power supply wiring would represent a fire risk.
- After installation, servicing or maintenance, the electric control box cover must be closed. Failing to close the electric control box cover risks fire or electric shock.
- The dotted lines indicate the field wiring or optional function.
- PQ and M1M2 communication ports both are used for indoor and outdoor communication, and only one of them can be used at a time. Meanwhile, be sure to connect the same communication ports (PQ to PQ; M1M2 to M1M2) to prevent damage to the main control board.
- D1D2 communication ports are used for group control communication. When connecting the group controller, the D1D2 port of the indoor units that are to be group controlled must be connected in a daisy chain, and the group controller must be connected to the X1X2 port of one of the indoor units in the group control, and set to group control mode. In addition, D1D2 communication ports can also be connected to the central controller.

**Abbreviations:**

MCA: Minimum Circuit Amps

MFA: Maximum Fuse Amps

FLA: Full Load Amps

## 08. Set external static pressure parameters

In the main interface, press "≡"+"↵" for 3 seconds at the same time, and the main interface will display "CC". Press the "▲" and "▼" to select the indoor unit ("n00-n63" is displayed, and the last two digits are the indoor unit addresses). Press the "↵" to enter the parameter setting interface, and "n00" will be displayed.

When "n00" is displayed, press the "↵" to enter the static pressure setting. Use the "▲" and "▼" keys to adjust to the demand parameter values, and press the "↵" to confirm.

Press the "⌚" button to return to the previous menu and exit the parameter setting. Parameter setting will also exit after 60 s of no operation.

Table 8.1: External static pressure setting (Concealed)-MFS

First level menu	Second level menu	Description	Default
n00	02/04/06/07/08/09/10	Static pressure level	2

## 11. Temperature and Airflow Distributions

### 11.01. Simulate condition

Table 11.1: Floor standing simulate condition

Model name	Room size (m)	Ceiling height (m)	Flow angle (Cooling/Heating)	Placing
MFS / MFF / MUF-022CS	6×6	2.4	90°/125°	Standing
MFS / MFF / MUF-028CS	6×6	2.4	90°/125°	Standing
MFS / MFF / MUF-036CS	6×6	2.4	90°/125°	Standing
MFS / MFF / MUF-045CS	6×6	2.4	90°/125°	Standing
MFS / MFF / MUF-056CS	6×6	2.4	90°/125°	Standing
MFS / MFF / MUF-071CS	6×6	2.4	90°/125°	Standing
MFS / MFF / MUF-080CS	6×6	2.4	90°/125°	Standing

Note:

1. These figures are based on software simulation. They show typical temperature and airflow distributions in the conditions above. In the actual installation, they may differ from these figures under the influence of air temperature conditions, ceiling height, cooling/heating load, obstacles, etc.

11.02. Airflow distributions (unit: m/s)

In the below charts, Y-Axis represents the height in meters (charts shows the installation height at 2.5m) and the X-Axis represents the floor distance in meters. These chart shows the air speed distribution 300s after the machine is turned on. The data in the curves shows air speed in meter per seconds (eg: 0.5 means the air speed in that area is 0.5m/s).

11.03. Temperature distributions

In the below charts, Y-Axis represents the height in meters (charts shows the installation height at 2.5m) and the X-Axis represents the floor distance in meters. These chart shows the air speed distribution 300s after the machine is turned on. The data in the curves shows temperature distribution.
